

LEAN INTO TOMORROW

What is Included with the Industry Assessments?

Overview: Industry Assessment Walk-Through

The goal of the walk-through is to give leaders and managers an opportunity to identify potential existing waste on the manufacturing floor.

- Investigation of current state of your manufacturing processes looking for potential bottlenecks, ineffective communication, and provide insight into efficiencies.
- Comprehensive, industry proven tools are utilized to measure your business's health including:
 - Effectiveness of leadership
 - Quality and performance measurements
 - Metrics and dashboarding

Overview: Industry Assessment Findings Report

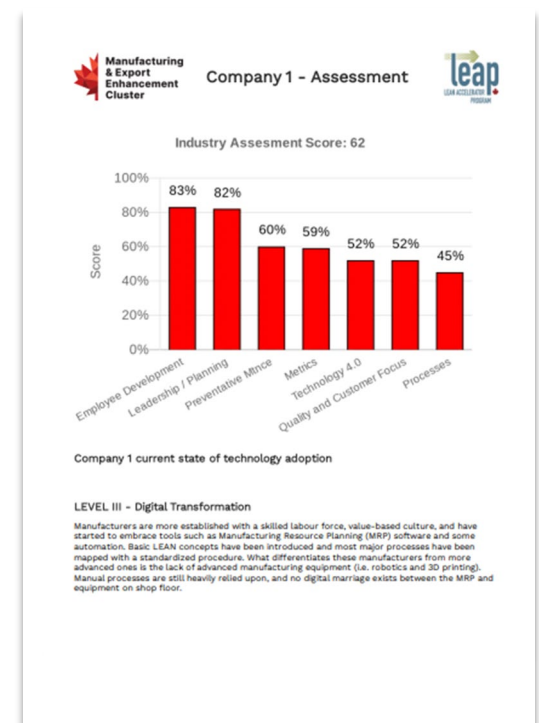

The main objective of the report is to provide businesses with recommendations and a value proposition to implement industry best practices to improve productivity, quality, safety, and reduce waste.

Current State Assessment

- Self-Assessment
- Business 'health-check'
- Evaluation of the current state, focusing on:
 - People
 - Process
 - Technology

Recommendations and Implementation Roadmap

- Recommendations focus on areas of greatest need and where your business can gain the biggest benefits.
- The roadmap is split into short, medium, and long term. This allows your business to focus on the most urgent needs first, allows for celebration of early wins, and takes a stepped approach allowing for stage-gates and splits investments into manageable chunks.
- The report also provides recommendations on government funding, other resources and programs, training, and relevant commercial solutions.
