Choosing the Correct Frame

EyeSafe™ offers a large selection of frames – from close-fitting wrapped and sealed options, to flat office styles. Here's what you need to know to choose the right frame for you.

WHAT EYE SAFETY HAZARDS DO YOU FACE AT YOUR WORKPLACE?

It is critical to understand the types of safety hazards that you will face at your workplace. Some hazards require special types of safety frames, such as chemical goggles if you are working closely with hazardous liquids. Sealed and semi-sealed frames work best for environments with airborne dust and debris.

To make sure that you receive the proper safety eyewear and the correct degree of eye protection, discuss your workplace hazards with your EyeSafe™ clinic.

KNOW YOUR FRAME MATERIAL CHOICES

Frames are available in both metals and plastics. Choose the proper materials based on your work environment and hazards, personal style, fit and feel. EyeSafe™ provides non-conductive eyewear for individuals who are exposed to electrical hazards.

COMFORT AND DESIGN

Every individual has a unique facial structure. The EyeSafe™ team has curated an industry leading selection of options to ensure your frame is light, an appropriate match to your prescription, fits well on the bridge of your nose, and provides a good level of peripheral vision. When visiting an EyeSafe™ clinic, you will be offered a selection of their core kit frames, which are kept in stock. However, any frame from this catalogue may be ordered, and will typically arrive within one week.

WHAT IS YOUR EMPLOYER'S POLICY REQUIREMENT?

Frame style

Does your employer require that you have a specific style of frame? For example, many employers require safety eyewear to consist of close-fitting style frames only, with minimum gap sizes between 6 to 8 mm. Check your job order for this information or ask your company safety professional for details.

Compliance standard

EyeSafe™ provides frames that meet CSA Z94.3 (Canadian Standards Association) and ANSI Z87.1 (American National Standards Institute). Your employer will have a policy as to which standard(s) are acceptable for safety frames. Check your job order for this information, or if in doubt, ask your company safety professional for details.

Side shields

All EyeSafe™ frames come with side shields as required by CSA Z94.3 and ANSI Z87.1 standards. Some frames are available with detachable side shields that can be completely removed when situations allow for it. When choosing a frame, ensure that the available side shields meet your employer's requirements as noted on your job order.

Wrap Frames

These close-fitting frames bring together both function and style.

The protective structure of an integrated side shield, quality material and available accessories make these wrap-around models ideal for the workplace. Wrap frames are great for indoor and outdoor work environments.

ALL FRAMES COME WITH SIDE SHIELDS. DETACHABLE SIDE SHIELDS NOT CSA CERTIFIED.

Checklist for a Perfect Fit

1. Are there pressure points on the side of the head or behind the ears?
2. Does the nose piece make contact without pinching?
3. Can you see clearly in all directions without major obstruction?
4. Is the overall weight of your safety eyewear evenly distributed between your ears?
5. Does your eyewear fit close to your face without hitting your eyelashes? Gaps should be less than or equal to 6-8mm, depending on your work environment.
6. Does your eyewear cover your eyebrow and any soft tissue around it?
7. Can you move your head front to back and tilt your head side to side without your eyewear shifting out of place?

A full-page background image showing a male worker with a beard, wearing a dark long-sleeved shirt, safety glasses, and a red flat frame helmet with colorful stickers. He is leaning over a large pile of steel rebar in a heavy industrial setting, likely a steel mill, with complex machinery and structural beams visible in the background.

Flat Frames

The most classic style of frame available.

Flat frames fit flat against your face without becoming airtight, offering good air circulation for high-humidity environments. Fitted with side shields to offer extra protection, flat frames are ideal for those who need protection but prefer the traditional look.

ALL FRAMES COME WITH SIDE SHIELDS. DETACHABLE SIDE SHIELDS NOT CSA CERTIFIED.

Did you know?

There are different kinds of certifications for protective frames! Some of the common ones are:

CSA Z94.3

is a frame certification for eyewear that meets CSA safety standards.

ANSI Z87.1

is a frame certification for eyewear that meets ANSI safety standards.

D3

is a frame certification for eyewear that meets ANSI splash and droplet protection standards.

D4

is a frame certification for eyewear that meets ANSI dust protection standards.

Ballistic 32432(GL)

is a US Military safety standard for general ballistic protection.

Ballistic 32432A

is a US Military safety standard for higher velocity ballistic protection.

ASTM F803

is a frame certification for protective sports glasses, and may not be used for safety glasses.

TAKING CARE OF YOUR SAFETY EYEWEAR

- Your safety eyewear should always be kept clear of dirt and debris.
- Use a proper cleaning cloth and store it in the provided protective case when not in use.
- Always check your eyewear before use.
- Look for any cracks, missing components, or a loose fit.
- If you think your eyewear may be unsafe for the hazard being faced, do not use the eyewear, and talk to your supervisor or a worksite safety professional straight away.

ALL SAFETY EYEWEAR IS COVERED FOR:

- Prescription changes for up to 120 days from completion
- Frame changes for up to 120 days from completion
- Frame defects for up to 1 year*

LENS COATING WARRANTIES

Basic coating	No warranty
Deluxe Coating	1 x Coverage includes coating flaws for up to 1 year from completion
Premium Coating	2 x Coverage includes coating flaws, regular wear and tear scratches for up to 2 years from completion

YOUR SAFETY EYEWEAR WARRANTY DOES NOT COVER:

- Deep scratches, chips, or cracks on the lens
- Nose pieces, dust dams, or other consumable items
- *Misuse: being sat on, handled roughly, or manually altered

*PLEASE NOTE

Do not attempt repair if your safety eyewear becomes damaged; it must be replaced immediately. Attempts at repair will void your eyewear's warranty.

Did you know?

In British Columbia, WorkSafeBC requires the minimum certification for safety frames as either CSA Z94.3 or ANSI Z87.1. Depending on your specific work conditions, your employer may also set additional restrictions to better ensure your safety.

Different provinces in Canada also have different rules! Make sure to ask your local EyeSafe program if you are unsure of what your local safety requirements are!
